

Perform basic video processing operations on the captured video. Read captured video in python and display the video, in slow motion and in fast motion.

Code:

```
import cv2, urllib.request

from google.colab.patches import cv2_imshow

# Download sample video
urllib.request.urlretrieve(
    "https://raw.githubusercontent.com/opencv/opencv/master/samples/data/vtest.avi",
    "video.avi"
)

# Read video
cap = cv2.VideoCapture("video.avi")

while cap.isOpened():
    ret, frame = cap.read()
    if not ret:
        break

    # Display video frame
    cv2_imshow(frame)

    # Change value:
    # 100 = slow motion
    # 10 = fast motion
    if cv2.waitKey(30) & 0xFF == 27:
        break

cap.release()
```

Output:
