

Implement image cropping, copying and pasting to select a region of interest (ROI) from the source image using Open CV.

Code:

```
import cv2, urllib.request

from google.colab.patches import cv2_imshow

# Download sample image

urllib.request.urlretrieve(

    "https://raw.githubusercontent.com/opencv/opencv/master/samples/data/lena.jpg",

    "img.jpg"

)

# Read image

img = cv2.imread("img.jpg")

# Crop ROI

roi = img[100:200, 100:200]

# Copy and paste ROI

img[250:350, 250:350] = roi

# Display images

print("ROI Image")

cv2_imshow(roi)

print("Modified Image")

cv2_imshow(img)
```

Output:

ROI Image

Modified Image
