

Implement an Eye detection algorithm using Open CV to detect and locate human eyes in the images.

Code:

```
import cv2, urllib.request
from google.colab.patches import cv2_imshow

# Download sample image
urllib.request.urlretrieve(
    "https://raw.githubusercontent.com/opencv/opencv/master/samples/data/lena.jpg",
    "eye.jpg"
)

# Download Eye Cascade file
urllib.request.urlretrieve(
    "https://raw.githubusercontent.com/opencv/opencv/master/data/haarcascades/haarcascade_eye.xml",
    "eye.xml"
)

# Read image
img = cv2.imread("eye.jpg")
gray = cv2.cvtColor(img, cv2.COLOR_BGR2GRAY)

# Load classifier
eye_cascade = cv2.CascadeClassifier("eye.xml")

# Detect eyes
eyes = eye_cascade.detectMultiScale(gray, 1.1, 4)

# Draw rectangles around eyes
for (x, y, w, h) in eyes:
    cv2.rectangle(img, (x, y), (x+w, y+h), (0,255,0), 2)

# Display result
print("Eye Detection")
cv2_imshow(img)
```

Output:

Eye Detection
