

Perform basic Image Handling and processing operations on the image is to read an image in python and detect the corners in the image using Harris Corner Detection function

Code:

```
import cv2, urllib.request
import numpy as np
from google.colab.patches import cv2_imshow
# Download sample image
urllib.request.urlretrieve(
    "https://raw.githubusercontent.com/opencv/opencv/master/samples/data/lena.jpg",
    "img.jpg"
)
# Read image
img = cv2.imread("img.jpg")
# Convert to grayscale
gray = cv2.cvtColor(img, cv2.COLOR_BGR2GRAY)
# Convert to float32
gray = np.float32(gray)
# Harris Corner Detection
corners = cv2.cornerHarris(gray, 2, 3, 0.04)
# Mark corners
img[corners > 0.01 * corners.max()] = [0,0,255]
# Display image
print("Corner Detected Image")
cv2_imshow(img)
```

Output:
